

A Report on House Hold Survey and Door to Door campaign Organised by UBA Cell, The ICFAI University, Jaipur

Date: 11.11.2024

Place-Vijayapura

The Unnat Bharat Abhiyan (UBA) Cell of, ICFAI University Jaipur, recently conducted a door-to-door legal awareness campaign and house hold survey in Vijayapura aimed at understanding and addressing the local issues faced by the rural population. This initiative is in line with the UBA's mission to connect higher education institutions with rural communities, fostering mutual growth and development.

Campaign and Survey Overview: The campaign and survey took place in a nearby village of Vijayapura where students engaged in a structured survey to identify the pressing concerns of the villagers. Each participating student had the opportunity to interact directly with residents, discussing their daily challenges, problems and collecting data on various issues. This allowed students to gain a practical understanding of social and legal issues in rural settings, thereby enriching their educational experience.

Objective of the Survey: The primary goal of the survey should be to understand the existing conditions in the village be it in terms of infrastructure, sanitation, education, healthcare, agriculture, water management, livelihood, and overall well-being. The data collected will help identify the village's strengths, challenges, and opportunities for sustainable development

Findings: The students documented a range of issues voiced by the villagers, including access to basic amenities, road, sewage and waste problem, as well as legal concerns. These findings will serve as a foundation for future actions and possible collaborations between the university's UBA cell and local authorities.

Conclusion: In conclusion, the door-to-door village survey offers a unique opportunity to gather in-depth, firsthand insights into the lives of rural residents. By engaging directly with each household, the survey provides a comprehensive understanding of local challenges and opportunities in areas such as infrastructure, healthcare, education, sanitation, and

livelihoods. This approach ensures that every voice is heard, and the data collected is both accurate and reflective of the community's needs. The success of the survey relies on active participation from villagers, support from local leaders, and careful planning by the survey team. Ultimately, the findings from this survey will serve as a valuable resource for developing targeted, sustainable interventions that improve the quality of life in the village and contribute to its overall development.
